

Filling compound for cavities | 2 dm³

Product number 2-TAPE-PF-MASTIC

Permanently elastic filling compound for smoothing uneven areas

Weight 1 kg

PEWOTAPE-PF Mastic is a petrolatum-based filler for filling cavities and leveling uneven surfaces on underground pipeline components (e.g., flanges and fittings). Due to its polystyrene sphere content, PEWOTAPE-PF Mastic is easier to work with than conventional petrolatum fillers, especially at low temperatures.

PF - Special Advantages:

- Outstanding formability and modeling properties
- Easiest manual application
- Low density
- High stability
- Long-lasting corrosion protection thanks to petrolatum
- Compatible with all PEWOTAPE petrolatum tapes
